NorthBridge Analytics — FY2026 Annual Report

Executive Summary

NorthBridge Analytics is a fictional mid-market data infrastructure company headquartered in Austin, Texas. Fiscal Year 2026 was a year of disciplined growth: the company expanded its customer base from 412 to 561 enterprise accounts while improving gross margin from 61% to 68%. This report summarizes the company's financial performance, product milestones, and strategic outlook for the coming fiscal year.

The board approved a renewed focus on the company's flagship product, NorthBridge Pulse, a real-time data observability platform, while sunsetting the legacy Batch Insights product line by the end of Q2 FY2027.

Financial Highlights

The net revenue of the company for FY2026 grew by 14%, reaching $182.4 million, up from $160.0 million in FY2025. Operating expenses increased by 9% year over year, driven primarily by investment in the engineering and customer success teams. Net income for the year was $21.6 million, compared to $14.3 million in the prior year.

Metric	FY2025	FY2026
Net Revenue	$160.0M	$182.4M
Gross Margin	61%	68%
Net Income	$14.3M	$21.6M
Enterprise Accounts	412	561
Employee Headcount	338	402

The board attributes the margin improvement primarily to the migration of NorthBridge Pulse customers onto the company's new multi-tenant cloud architecture, which reduced average infrastructure cost per customer by 23%.

Product & Strategy Outlook

Looking ahead to FY2027, NorthBridge Analytics plans to launch NorthBridge Pulse 2.0 in the second quarter, introducing anomaly detection powered by on-device machine learning models. The company is also evaluating expansion into the European market, with a target launch in Germany and the Netherlands by Q4 FY2027, pending regulatory review.

Management has set a target of $225 million in net revenue for FY2027, representing approximately 23% year-over-year growth. The company does not expect to raise additional external funding in the next fiscal year and intends to fund this growth from existing cash reserves and operating cash flow.

Key risks identified by management include increased competition from larger cloud infrastructure providers entering the observability space, and potential delays in European regulatory approval that could push back the planned international launch.
